Peripheral #3: The Repeater:

This peripheral is a little bit special; it'll repeat what a real screen will show (called "source"), but on another screen (called "repeater").

Build two 16x9 screen (using web screens blocks). Turn on the source screen (right-click it with nothing in the hand). Then, select it by right-clicking it using the wireless linker. Once the source has been selected, click on the second screen *using the linker*. That's it 😊

Peripheral #4: The Remote Controller:

Crafted like this:

The Remote Controller once linked to a screen will enable you to change the URL of its linked screen wherever you want; this might be useful to make a screen control room and change the URL from far.
